

TitraFix™ - NEW CONCENTRATED VOLUMETRIC SOLUTION

DESCRIPTION OF NEW PRODUCT TitraFix™

Concentrated volumetric solution is a specified quantity of pure substance (in a form of weighed solid substance or precisely measured volume of solution closed in a vial) destined for preparing standard volumetric solution. After opening the vial, pour it by volume into a measurement flask of given volume and after topping up with water to a line, you get a standard volumetric solution of requested concentration.

Main benefits of using new concentrated volumetric solution TitraFix™ from POCH:

- **safety of work** - innovative method of ampoule design, which guarantees **100% tightness**,
- **precision of analyses** - complete transfer by volume of substance from ampoule to flask thanks to special system of uniform distribution of water on ampoule walls,
- **specified range of tolerances** of each analytical sample,
- **reliable quality** - ring (**seal**) informs that the ampoule has not been opened before,
- **easiness of application** - now, you can obtain ready to use standard volumetric solution by adding appropriate quantity of water,
- **safety of time** necessary to prepare standard volumetric solution,
- **ergonomic and safe** package,
- **optimum logistics** - reduction of storage space, less transportation costs.
